

BR3PT450 mini welder

Balacchi HF extends its range of high frequency welders, offering a compact, economic, low-power machine for different applications, often required alone or as a complement of bigger HF equipment.

BR3PT450, furnished with appropriate electrode, is designated to carry out delicate jobs that require manipulation of materials and welding operation performed cautiously on small fabric area. It is suitable for repair work, small-scale manufacturing and manufacturing of products with details that require several different welding operations like welding of flexible protections, swimming pool cladding, production of advertising material, sunscreen canvases, etc.).

The main advantage of this machine is that it is portable, thus it can be used not only in the factory where final product are manufactured, but also it can be brought directly to client plant performing the eventual repair on site.

Balacchi HF mini welder is equipped with numerous accessories that provide easier (and safe) job execution and fabric manipulation: press protection system, foot pedal, specially designed, personalised and engraved electrodes, easy electrode changing system, etc.

Technical performances BR3PT450

Pressing force	300 kg
Power	3 kW
Work frequency	27.125 MHz
Dimensions	600x1500x950(h)mm
Weight	150kg
Inferior working table (fixed)	600x550mm
Electrode	400x15mm or similar
high of work	120 mm
Distance from generator and welding center	450mm
Commands on front side machine with management operator panel
